BioEmissionTechnology

your eyes to *in vivo* imaging

γ -eye

The only low-cost, portable scintigraphic camera
for whole-body mouse dynamic imaging

γ -eye at a glance

- The only truly portable mouse scintigraphic system
- Whole body static and dynamic mouse scans
- Including laptop with preinstalled analysis software
- Delivered in a protective, easy of transport suitcase
- Optimized for ^{99m}Tc -labelled tracers
- Option to image other SPECT isotopes, upon request

γ -eye software

Complete an imaging study in just 4 quick steps:

- Database archive

Easy import of all essential study protocol parameters

- Real-time imaging

Real time visualization with user defined refresh rate

- Post-processing

Easy-handled tools for standard processing analysis

- Reporting

Report with study parameters, images and kinetic curves

For research use only. Not for use in diagnostic procedures.
